***Information Disclosure Statement***

1. The references 54-002646 and 8-319214 drawn to a divider to an oscillator and a soap, respectively, have not been considered since they are not considered to be related to the instant invention and don't match the description in the instant disclosure. Applicant is advised that the date of any re-submission of any item of information contained in this information disclosure statement or the submission of any missing element(s) will be the date of submission for purposes of determining compliance with the requirements based on the time of filing the statement, including all certification requirements for statements under 37 CFR 1.97(e). See MPEP § 609.05(a).

***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tachiwama (6,818,578) further in view of Inoue et al (4,226,627).

Tachiwama teaches an optical glass composition having refractive index greater than 1.875 and an Abbe's number of greater than 39.5 including:

SiO <sub>2</sub>	3-10 wt%
B <sub>2</sub> O <sub>3</sub>	7-15
La <sub>2</sub> O <sub>3</sub>	30-60
Gd <sub>2</sub> O <sub>3</sub>	0-30 (column 5, lines 33-34.

Art Unit: 1755

Ta<sub>2</sub>O<sub>5</sub> 13-19 (column 6, lines 9-12)

Li<sub>2</sub>O 0-1 (column 7, lines 7-14, with Li<sub>2</sub>O being preferred).

Tachiwama fails to teach the presence of fluorides in the optical glass.

Inoue et al teach an optical glass similar in composition to the claimed glass and that taught by Tachiwama where fluorides may be added to lower the liquidous and decreasing devitrification.

It would have been obvious to one of ordinary skill in the art to further include a fluoride in the composition of Tachiwama because Inoue et al teach a fluoride may be added to lower the liquidous temperature and decrease the devitrification.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
